Direct Submission

L Submitted (24-MAY-2004) Sanger Institute, Hinxton, Cambridgeshire, C.B.O. 15A, UK. E-mail enquiries: c22g@sanger.ac.uk Manuscript Sanger Institute name: pGEM. DK29F11.1

Homo sapiens cDNA sequence. This sequence was generated as part of The Wellcome Trust Sanger Institute program to isolate cDNA clones representing the full length open reading frame of well annotated protein coding genes on human chromosome 22. For more information see http://www.sanger.ac.uk/HGP/Chr22/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1654 bp mRNA linear PRI 25-MAY-2004 Homo sapiens bK29F11.1 full length open reading frame (ORF) cDNA clone (CDNA clone C22ORF:pGEM.bK29F11.1).

New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics.

## Claim 20; Page 134; 586pp; English.

The present invention describes NOVX proteins, where X can be 1 to 55

(e.g. NOVI). Also described: (1) a composition comprising a polypeptide
described above and a carrier; (2) a kit comprising, in one or more
containers, the composition described above; (3) an isolated mucleic acid
molecule which encodes a NOVX protein of the invention; (4) a vector
comprising the nucleic acid molecule described above; (5) a cell
comprising the above vector; (6) an antibody that immunospecifically
binds to the polypeptide described above; (7) methods for determining the
presence or amount of the above polypeptide or nucleic acid molecule in a
sample; (8) methods for determining the presence of or predisposition to
a disease associated with altered levels of expression of the above
collypeptide or nucleic acid molecule in a first mammalian subject; (9) a
method of identifying an agent that binds to the polypeptide described
above; (10) a method for identifying a potential therapeutic agent for
use in treating a pathology that is related to an aberrant expression or
aborrant physiological interactions of the polypeptide; (11) a method of
carrier physiological interactions of the polypeptide; (12) a method for modulating
cor preventing of the polypeptide described above; (13) methods of treating
cor preventing a pathology associated with the polypeptide; (12) method for modulating
cor preventing a pathology associated with the above polypeptide. NOVX
sequences have antidiabetic, anorectic, antibacterial, virucide,

New reagent for modulating the activity of sphingosine kinase-like protein polypeptide or polynucleotide and treating cancer, asthma, allergy, an autoimmune disease, or a central or peripheral nervous system disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  315
                                                                                                                                                                              The invention relates to a human sphingosine kinase-like protein. The polypeptide can be expressed by standard recombinant methodology. The sphingosine kinase-like protein and gene can be used to regulate intracellular signalling and consequently cell proliferation and apoptosis. Such regulation is useful for treating cancer, allergies (e.g. atthmat, autoimmune diseases (e.g. theumatoid arthritis) and central and peripheral nervous system disorders (e.g. Parkinson's disease). The present sequence represents the human sphingosine kinase-like protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 255

Human sphingosine kinase-like protein encoding cDNA

03-JUL-2002

```
preparing a composition for treating diseases or disorders, e.g., cancer, or neurological, immunological or inflammatory disorders.
```

Example 1; SEQ ID NO 55; 366pp; English.

This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunemodulator and antiinflammatory activities. This polymucleotide sequence is a human kinase DNA sequence of the invention.

WPI; 2004-376182/35. P-PSDB; ADP55248 PRO polynucleotides and polypeptides, useful in useful in diagnosing treating an immune related disease, e.g. systemic lupus hematosus, rheumatoid arthritis, diabetes mellitus or asthma and in stimulating an immune response. erythematosus, New and

Claim 2; SEQ ID NO 1223; 3009pp; English.

The present invention describes an isolated PRO nucleic acid (1). Also described: (1) a vector comprising (1); (2) a host cell comprising the vector of (1); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the isolated PRO polypeptide; (5) a chimeric molecule comprising the polypeptide of (4); (7) a composition of matter comprising a polypeptide of (4); (7) a composition of matter comprising a polypeptide of (4); (7) a comprising a container, a label on the container and a composition of matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide in a sample suspected of having the presence of a PRO polypeptide in a sample suspected of faving the polypeptide; (11) a method of identifying a compound that inhibits or mammal; (12) a method of identifying a compound that inhibits or minics the activity of or expression of a gene encoding a PRO polypeptide; and (13) a method of stimulating the immune response in a mammal; (12) a method of stimulating the immune response in a mammal; (13) a method of stimulating the immune response in a mammal; (13) a method of stimulating the immune response in a mammal; (14) a method of stimulating the immune response in a mammal; (15) a method of stimulating the immune response in a mammal; (16) a method of stimulating the immune response in a mammal; (17) a method of stimulating the immune response in a mammal; (18) a method of stimulating the immune response in a mammal; (18) a method of stimulating the immune response in a mammal; (18) a method of stimulating the immune response in a mammal; (18) a method of stimulating the immune response in a mammal; (18) a method of stimulating the immune response in a mammal; (18) a method of stimulating the immune response in a mammal; (18) a method of stimulating and subsective antistribution; antistribution; antistribution; antirheumatic, antithyroid, CNS, dermatological, gastrointestinal, haemostatic, hepatotropic, immunostimulant, immunosupressive, muscular, nephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and virucide activities, and can be used in gene therapy. The nucleic acid (I) and the encoded polypeptides, compositions, kits and methods are useful in diagnosing and treating an immune related disease and in stimulating an immune response. The present sequence represents a human PRO nucleotide sequence from the present invention.

this invention relates to the CDNA sequences encoding an isolated novel human polypeptide. The protein encoded by the nucleic acid of the invention is useful for treating central and peripheral nervous system disease. Givention is useful for treating central and peripheral nervous system disease, amyotrophic diseases (e.g. peripheral nervopathy, Huntington's disease, amyotrophic clateral sclerosis); neurodegenerative disease (e.g. parkinson's disease, amyotrophic content of particles of systemic lupus services, burns; bone disorders (e.g. systemic lupus) certhematosid arbhritis, insulin-dependent diabetes mellitus); wounds, ulcers, burns; bone disorders (e.g. osteoporosis, osteoarthritis); mechanical and traumatic disorders (e.g. stroke, head trauma); lung or liver fibrosis; reperfusion injury in various tissues; cancer and tumours; and inflections; allergic conditions such as allergic rhinitis, asthma; coagulation disorders (e.g. septic shock, Crohn's disease, anaphylaxis). The protein may be used to inhibit the growth, inflection or function of infections agence such as bacteria, fungi, viruses, or to effect bodily characteristics, biorhythms or circadian cycles of rhythms. The protein may also have

Cycles of rhythms. The protein may also have

Cycles of rhythms. The protein may also have

Cycles of rhythms. The protein may also have

Cycles of rhythms. The cyclein may also have

Cycles of rhythms. The cyclein may also have

Cycles of thythms. The cyclein for may also have

Cycles of thythms sequences of the invention are useful for expressing recombinant protein for analysis. The present sequence is an expressed of human cDNA sequence of the invention, this sequence is an expressed of sequence tag (EST) and was identified using subtractive hybridisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1323
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1383
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1443

This sequence represents cDNA encoding a human ceramide kinase designated hCERKI. The invention relates to hCERKI, nucleic acids encoding it, expression vectors and host cells containing hCERKI nucleic acids, the recombinant production of hCERKI and antibodies specific for hCERKI. The invention also encompasses methods of isolating hCERKI from samples, the use of hCERKI in drug screening, and the use of hCERKI nucleic acid sequences in gene therapy. hCERKI mediates the ATP-dependent 1 phosphorylation of ceramides and can be used to screen for therapeutic and preventive agents for a wide range of disorders. Such disorders include neurological disease, inflammation, human immunodeficiency virus (HIV) infection, type 2 diabetes, obesity, sepsis, arteriosclerosis and
                                                                                                                                                                                                                                                                                                               Human, ceramide kinase, hCERKI; drug screening, gene therapy; neurological disease; inflammation; human immunodeficiency virus; HIV infection; type 2 diabetes; obesity; sepsis; arteriosclerosis; cancer; neuroprotective; antiinflammatory; anti-HTV; antidiabetic; anorectic; antibacterial; antiseptic; antiarteriosclerotic; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human ceramide kinase gene and the enzyme encoded by it for screening substances as drugs for neurological, inflammatory and other disorders.

The invention relates to isolated NOVX polypeptides and polymucleotides.

NOVX polypeptides and polymucleotides are used to prevent, diagnose or treat a medical condition in human related to the abbrrant expression and activity of NOVX by supplementing the patient our polymucleotides may be used to treat disorders associated with decreased expression or activity of NOVX by supplementing the patient our production or to rectify mutations. Conversely, antisense NA molecules may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX polypucleotides and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of restorative therapy. NOVX polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of NOVX. The anti-NOVX polypeptides antibodies, agonists and antagonists may also be used as antigens in the antigenides. The anti-NOVX polypeptide antibodies, agonists and antagonists may also be used to modulate NOVX polypeptide antibodies may be used in this way to prevent, clagnostic agents for detecting the presence of NOVX in samples. NOVX polypeptides and polymucleotide may be used in this way to prevent, disquesse, nancers, cancer, dispecters, diabetes, obesity, infectious dispense, anorexia, cancer, cancer associated cachexia, meurodegenerative discuters, associated cachexia, meurodegenerative chaematopoietic disorders, and the various dyslippidaemias, metabolic wasting disorders associated with obesity, the metabolic syndome X and various cancers. They may also be used as antibactorial agents. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    140

Human; sphingosine kinase; SphK; restenosis; ischaemia; gene therapy; antisense therapy; cancer; sphingolipid; signalling molecule; apoptosis; cytostatic; tumour necrosis factor-alpha; TNF; atherosclerosis; lymphoma; leukaemia; vasotropic; cell proliferative disorder; vascular disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  An isolated Sphingosine kinase polypeptide useful for treating a SphK-associated disorder especially cancer, restenosis or ischemia in a human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to sphingosine kinase (SphK) polypeptides and nucleic acids encoding them. SphK is useful for treating a SphK-sesociated disorder especially cancers such as leukaemia, lymphoma, ovarian, breast, lung, colon, testicular, stomach and skin, atherosclerosis, restenosis or ischaemia and cell proliferative disease or disorder associated with vascular diseases. SphK gene is used in gene therapy and antisense-therapy. Sphingolipids serving as signalling molecules, have recently emerged as regulators of cell growth, diverse cell phenotypes and cell death. Activation of SphK by tumour necrosis factor (TMF) -lipha inhibits apoptosis in human endothelial cells. The present sequence is human sphingosine kinase

sphingosine to form sphingosine 1-phosphate. The polynuclectide was isolated from an HeLa cDNA library by PCR amplification. The invention provides polynuclectides (see AAX50508-10) and polypeptides (see AAX96057-59) for the human sphingosine kinase (SK) homologues SKA, SKB and SKC. The polynuclectides may be used as hybridization probes, in the construction of PCR primers for chromosome and gene mapping, in the recombinant production of SKA, SKB and SKC, and in the generation of antisense DNA or RNA. They can be used to detect inflammation or disease differences in gene sequence between normal and carrier or affected individuals. Host cells expressing SK can be used in drug screening. Human SK specific antibodies, inhibitors, ligands or their analogues are useful as bioactive agents to treat inflammation or disease including curstly bacterial or fungal infections, allergic responses, mechanical injury associated with trauma, hereditary diseases, lymphoma or carcinoma, and other conditions with activate the genes of kidney, lung,

                                                                                                                                                  A Y;
                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antinflammatory, neuroprotective, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, haematopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic DNA of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GGAGCCGCCCCCCCGCCC-GGCCTCACCAAGGCCCCAGCCCTTCCCAGACTCACCT 996

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in
                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; SEQ ID NO 13532; 103pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           261
                                                                                                                                                                                                                The present sequence is the coding sequence for human sphingosine kinase 4 (SPHK4). The kinase can be used for the diagnosis and treatment of sphingosine related disorders. The kinase can also be potentially used for controlling toxicity of platelet transfusion and as a platelet

                                                                                                                               ਨੇ
                                                                                                                                                                                                                                                                                              કે
                                                                                                                                                                                                                                                                      The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, ollowers, and for chomosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders involving abberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations capposed and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patient did not appear in the printed specification, but was obtained in constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ------11eValCysValGlyGlyAspGlyMetPheSerGluValLeuHisGlyLeu 207
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  303 TCCTGCAGCATCGTCTGTGTGTGGCGGAGATGGTATGTTCAGCGAGGTGCTGCTGCACGGTCTG 362

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a human sphingosine kinase-like protein. The polypeptide can be expressed by standard recombinant methodology. The sphingosine kinase-like protein and gene can be used to regulate intracellular signalling and consequently call proliferation and apoptosis. Such regulation is useful for treating cancer, allergies (e.g. asthma), autoimmune diseases (e.g. rheumatoid arthritis) and central and peripheral nervous system disorders (e.g. rexkinson's disease). The present sequence represents the human sphingosine kinase-like protein
                                                                                                                                                                                                  Human sphingosine kinase-like protein; intracellular signalling; gene; cell proliferation; apoptosis; cancer; allergy; cytostatic; asthma; autoimmune disease; rheumatoid arthritis; Parkinson's disease; ss.
              New reagent for modulating the activity of sphingosine kinase-like protein polypeptide or polynucleotide and treating cancer, asthma, allergy, an autoimmune disease, or a central or peripheral nervous disorder.
                                                                                                                                                                                                                                                                     /*tag= a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed centers. (I) is useful in gene therapy techniques to restore normal certifying of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, foreanise, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
